Jordan Lee

Senior Software Engineer - Video Streaming

jordan.lee@example.com +1 512 555 0142 Austin, TX

PROFILE

Senior video player engineer with 11+ years of experience building OTT playback SDKs, live streaming pipelines and ad-supported video platforms across iOS, Android and connected TV.

PROFESSIONAL EXPERIENCE

03/2022 – 08/2026
Austin, TX

Lumenstream

Senior Video Player Engineer

Lead the cross-platform playback team for a subscription streaming service with millions of monthly viewers.

- Designed the Apple playback architecture using AVFoundation, AVPlayer, AVPlayerItem and AVPictureInPictureController.
- Migrated the Android player framework from ExoPlayer 2 to Android Media3 across phone, tablet and Android TV apps.
- Built adaptive bitrate (ABR) heuristics that reduced rebuffering by 18% using playback telemetry.
- Integrated Google IMA SDK, VAST 4.x and VMAP ad workflows for client-side ad insertion.

Technologies

Swift • Kotlin • AVFoundation • ExoPlayer • Android Media3 • HLS • LL-HLS • FairPlay • Widevine • Google IMA SDK • VAST • VMAP

06/2019 – 02/2022
Austin,
United States

Signalwave Media

Video Streaming Engineer

Built live and on-demand streaming infrastructure for regional sports and news broadcasters.

- Designed live ingest pipelines supporting SRT, RTMP and MPEG-TS for 40 broadcast channels.
- Built Low-Latency HLS (LL-HLS), MPEG-DASH and CMAF packaging workflows with FFmpeg and GStreamer.
- Integrated AWS MediaLive, MediaPackage and MediaTailor into cloud broadcast workflows.
- Automated deployments using Docker, Kubernetes and Terraform.

Technologies

C++ • Python • FFmpeg • GStreamer • HLS • CMAF • MPEG-DASH • SRT • RTMP • AWS MediaLive • MediaPackage • MediaTailor • Docker • Kubernetes

01/2017 – 05/2019
Portland,
United States

Northbeam Video Inc

Software Engineer

Developed components for an enterprise video delivery platform used by cable operators.

- Developed C++ services for video ingest, transcoding orchestration and media workflow automation.
- Built HLS and DASH packaging services for VOD and live streaming platforms.
- Integrated PostgreSQL, Redis and Elasticsearch into stream management systems.

Technologies

C++ • Linux • FFmpeg • MPEG-TS • HLS • DASH • Redis • PostgreSQL • Elasticsearch • Jenkins

07/2015 – 12/2016
Seoul, South Korea

Hanbit Apps

Junior Backend Developer

Started my career building backend services and internal web tools.

- Developed RESTful APIs using Java and Spring Boot.
- Designed relational database schemas using PostgreSQL and MySQL.

Technologies
Java • Spring Boot • JavaScript • React • PostgreSQL • MySQL • REST APIs

EDUCATION

09/2011 – 06/2015 **Bachelor's degree / Computer Science**
Seattle, WA University of Washington

SKILLS

Video Streaming
- Live Streaming
- Video on Demand (VOD)
- OTT Platforms
- Low-Latency HLS
- DRM
- Widevine
- FairPlay

Programming Languages
- C++
- Kotlin
- Swift
- Java
- Python

Video Players
- HLS.js
- ExoPlayer
- AVPlayer
- Shaka Player
- Video.js

Streaming Infrastructure
- FFmpeg
- GStreamer
- AWS MediaLive
- SRT
- RTMP

Advertising Technology
- Google Ad Manager
- OpenRTB
- VAST 2.x–4.x
- VMAP
- SSAI

Cloud & DevOps
- AWS
- Docker
- Kubernetes
- Terraform
- Prometheus
